

# Title of the School

## Aims of the school

*Give a brief description of the subject area of the proposed school, a statement of the objectives and an indication of its relevance, importance, timeliness and possible fallout.*

## Dates

*Please, indicate a preferred time period: year plus a week, preferably in June, July or September.*

*In any case, the final period (and the venue) of a school is decided by the CIME Scientific Committee, in agreement with the Scientific Directors of the school.*

## School Directors

*Although a school may have from one to three directors, preferably there should be an Italian and a foreign director (that is, a director with a permanent position in a foreign institution). Give name, affiliation and essential information about each director (you may enclose a curriculum).*

## Teachers and courses

*A typical CIME School consists of four (minimum three, maximum five) courses and each course consists of a minimum of 6 hours of lesson. Globally a school ranges from 24 to 30 hours of lesson. Exceptionally, different organizations may be taken in consideration.*

*Give names and affiliations of teachers, title, intended length and a short description of each course. One or more Directors of the school may also be teachers (this feature may be in fact considered favorably).*

*We recall that each lecturer will be required to prepare notes of the course to be published in a dedicated volume of the CIME Foundation Subseries of the Springer Lecture Notes in Mathematics (notice that for this, CIME usually pays*

*an honorarium to the lecturers, proportional to the number of hours of the given lectures).*

### **Course 3 - Title 3**

....

.....

### **Course 4 - Title 4**

....

.....

## **Bibliography**

*Give a (concise) list of the main references on the subject of the school.*

## **Grants and extra financing**

*Give information about possible grants which can participate in financing the school.*

*Indeed, the main aim of CIME is the training of young researchers, then, when organizing a school, we try to offer the largest possible numbers of grants to cover living expenses of young participants. The reduction of CIME expenses and the existence of financial support from the Scientific Directors or other sources will affect in particular the numbers of available grants for young participants.*

*In particular, we encourage the Scientific Directors and the speakers to cover their own travel expenses with personal research funds; please give information about this.*

## **Final remarks**

*Write here any information which you consider interesting and that is not included in the above sections.*
